Chip, Chip Prenate	

#### SCOPE:

Superior Health PlanPharmacy Department, Medical Directors

#### **PURPOSE:**

It is the policy of Superior HealthPlan to follow state guidance for medical necessity review of burosumab (Crysvita). This medication is a pass through drug (non-risk based payment drug) and should follow state guidance for medical necessity review for Medicaid/CHIP due to the manner in which it is reimbursed. All determinations will be performed by a Superior Medical Director. A pharmacy clinician will review the prior authorization request and make a recommendation to the Medical Director but will not make the ultimate determination on any case.

#### **BACKGROUND:**

*Description/Mechanism of Action:* 

Burosumab (Crysvita) binds to and inhibits the activity of fibroblast growth factor 23 (FGF23), thereby restoring renal phosphate reabsorption and increasing the serum concentration of 1,25 dihydroxy vitamin D.

#### Formulations:

Crysvita injection for subcutaneous administration is available as one single-dose vial per carton in the following strengths:

- 10 mg/mL
- 20 mg/mL
- 30 mg/mL

# FDA Approved Indications:

Burosumab (Crysvita) is approved for the treatment of X-linked hypophosphatemia (XLH) in adult and pediatric patients 1 year of age and older.

Chip, Chip Prenate	

#### PROCEDURE:

Provider must submit documentation (which may include office chart notes and lab results) supporting that member has met all approval criteria.

## I. Initial Approval Criteria:

## A. X-linked hypophosphatemia (XLH)

- 1. All prior authorization approvals or denials will be determined by a Superior HealthPlan Medical Director.
- 2. Medication is prescribed by or in consultation with a nephrologist or endocrinologist.
- 3. Member is one year of age or older.
- 4. Member has a diagnosis of XLH (ICD-10: E83.30 or E83.31) supported by one of the following:
  - a. Documentation of a confirmed phosphate regulating gene with homology to endopeptidases located on the X chromosome (PHEX-gene) mutation.
  - b. Serum fibroblast growth factor-23 (FGF23) level greater than 30 pg/ml.
- 5. Documentation that the prescriber will discontinue any oral phosphate or active vitamin D analog supplementation at least one week prior to starting burosumab (Crysvita) therapy.
- 6. Documentation that the prescriber agrees to measure serum phosphate throughout therapy and withhold medication when serum phosphorus is above 5 mg/dl.
- 7. Burosumab (Crysvita) will not be approved for members who currently use oral phosphates and active vitamin D analogs; whose serum phosphorus is within or above the normal range for member's age; or for members with severe renal impairment or end stage renal disease.

Note: Documentation of the member's dosage, administration schedule, number of injections to be administered during the prior authorization period, requested units per injection, and the dosage calculation must be submitted.

**Approval duration:** 12 months

## I. Continued Therapy

#### A. X-linked hypophosphatemia (XLH)

- 1. Currently receiving medication via the company benefit or member has previously met initial approval criteria or had received the drug from a previous Medicaid MCO (continuity of coverage).
- 2. All approvals or denials for continued therapy will be reviewed by a Superior Medical Director to continue coverage.
- 3. Documentation that the physician will continue monitoring serum phosphate levels.
- 4. Documentation from physician confirming one of the following:
  - a) The member has achieved normal level of serum phosphate.
  - b) The member has demonstrated a positive clinical response to burosumab (Crysvita) (e.g., enhanced height velocity, improvement in askeletal deformity, reduction of fractures, and reduction of generalized bone pain).

Note: Documentation of the member's dosage, administration schedule, number of injections to be administered during the prior authorization period, requested units per injection, and the dosage calculation must be submitted.

**Approval duration:** 12 months
